

**IN THE CLAIMS**

Please amend the claims as follows:

Claim 1 (currently amended): A columnar honeycomb structural body comprising:  
a porous ceramic block having a plurality of through holes extending in parallel with  
one another in a length direction of the porous ceramic block, the porous ceramic block  
having a wall portion interposed between the through holes,  
wherein the through holes have one of ends sealed such that an opening area of one  
end face of the through holes is larger than an opening area of the other end face of the  
through holes, the plurality of through holes includes a plurality of large through holes and a  
plurality of small through holes, the large through holes have cross-section areas which are  
larger than cross-section areas of the small through holes, the large through holes and the  
small through holes are positioned such that a distance between centers of gravity of the  
cross-section areas of adjacent ones of the large through holes is set to be equal to a distance  
between centers of gravity of the cross-section areas of adjacent ones of the small through  
holes, the opening area of one end face of the through holes and the opening area of the other  
end face of the through holes have a ratio in a range between 1.01 to 6, the wall portion has a  
plurality of micro pores having an average pore diameter in a range from 5 to 30  $\mu\text{m}$ , the  
micro pores include large micro pores having a pore diameter two or more times larger than  
the average pore diameter, and the large micro pores have a capacity of which a rate is set to  
30% or less of a capacity of the micro pores in entirety.

Claim 2 (original): The honeycomb structural body according to claim 1, wherein the  
opening area on a gas inlet side is made larger than the opening area on a gas outlet side.

Claim 3 (previously presented): The honeycomb structural body according to claim 1  
or 2, wherein the wall portion includes a partition wall for separating through holes on a gas  
inlet side from one another.

Claim 4 (previously presented): The honeycomb structural body according to claim 1, wherein the wall portion has a porosity in a range from 30 to 70%.

Claim 5 (previously presented): The honeycomb structural body according to claim 1, wherein the plurality of through holes on a cross-section perpendicular to the length direction has a density in a range from 15.5 to 62.0 pcs/cm<sup>2</sup>.

Claim 6 (previously presented): The honeycomb structural body according to claim 1, wherein the porous ceramic block comprises silicon carbide as a main material.

Claim 7 (previously presented): The honeycomb structural body according to claim 1, wherein said wall portion has a thickness in a range from 0.1 to 0.5 mm.

Claim 8 (previously presented): An exhaust gas purifying device for a vehicle, comprising the honeycomb structural body according to claim 1.

Claim 9 (previously presented): The honeycomb structural body according to claim 2, wherein the wall portion has a porosity in a range from 30 to 70%.

Claim 10 (previously presented): The honeycomb structural body according to claim 2, wherein the plurality of through holes on a cross-section perpendicular to the length direction has a density in a range from 15.5 to 62.0 pcs/cm<sup>2</sup>.

Claim 11 (previously presented): The honeycomb structural body according to claim 2, wherein the porous ceramic block comprises silicon carbide as a main material.

Claim 12 (previously presented): The honeycomb structural body according to claim 2, wherein said wall portion has a thickness in a range from 0.1 to 0.5 mm.

Claim 13 (previously presented): An exhaust gas purifying device for a vehicle, comprising the honeycomb structural body according to claim 2.

Claim 14 (previously presented): The honeycomb structural body according to claim 4, wherein the plurality of through holes on a cross-section perpendicular to the length direction has a density in a range from 15.5 to 62.0 pcs/cm<sup>2</sup>.

Claim 15 (previously presented): The honeycomb structural body according to claim 4, wherein the porous ceramic block comprises silicon carbide as a main material.

Claim 16 (previously presented): The honeycomb structural body according to claim 4, wherein said wall portion has a thickness in a range from 0.1 to 0.5 mm.

Claim 17 (previously presented): An exhaust gas purifying device for a vehicle, comprising the honeycomb structural body according to claim 4.

Claim 18 (previously presented): The honeycomb structural body according to claim 5, wherein the porous ceramic block comprises silicon carbide as a main material.

Claim 19 (previously presented): The honeycomb structural body according to claim 5, wherein said wall portion has a thickness in a range from 0.1 to 0.5 mm.

Claim 20 (previously presented): An exhaust gas purifying device for a vehicle, comprising the honeycomb structural body according to claim 5.
